

Homework Guidelines

0. All the standard UBC rules apply.
1. All homeworks will count equally to the homework mark.
2. You are encouraged to discuss the homework problems with me, other people in the class, and other students in the department. Talking about physics is a really important part of doing physics. However, the solutions you turn in should be written by you alone and reflect your own understanding of the subject.
3. I very strongly encourage you to make use of my office hours, and to ask lots of questions about the homeworks and the material in the course.
4. If you can't make my office hours and you have questions, send me an email and we can arrange to meet some other time.
5. You can consult any books/notes/websites you like, but please don't look at any of the solutions from last year.
6. Homeworks are due by the end of class on the day they are due.
7. I will consider giving extensions on an individual basis. However, if the reason for the request is something foreseeable, like a big experimental run, please talk to me well in advance.
